Canon EF-S 18-55mm F/3.5-5.6 IS II Lens

Rs.12,000

Description:

Product Highlights

- 58mm Filter Diameter
- Canon EF-S Mount Lens
- Aspherical Element
- Optical Image Stabilization
- 29 to 88mm (35mm Equivalent)
- Constant Minimum Focus Distance: 9.8inches
- Circular Diaphragm
- Aperture Range: f/3.5-38

The **EF-S 18-55mm f/3.5-5.6 IS II Lens** from **Canon** is a typical zoom lens which features the minor size image circle, entirely designed for Canon cameras with the APS-C size sensor. The focal length is equivalent to 29 to 88mm in the 35mm format. It is a adaptable lens for daily shooting and can focus up to 9.8inches.
This lens includes Canon's Optical Image Stabilization technology, which offers up to four stops of reimbursement for image smudge caused by shaking of camera and deliberate shutter speeds. This makes sure apparent, crunchy images, even in less light.

1 aspherical lens element reduces aberrations and lets an overall high standard of performance and its round aperture consequences in lovely background blur.

Uses optics designed to get full benefit of the tiny image circle and small back focus in EF-S lenses.
Optical image stabilization compensates for shake of camera up to four stops for brighter imaging even in low light conditions.
Offers a continuous minimum focus distance of 9.8inches (25 cm)
Features one aspherical lens element that minimizes aberrations and gives sharp imaging.
Rounded aperture diaphragm results a better-looking look to out-of-focus background regions in images shot using the wider apertures.
Compact in size and lightweight
