Sony ZV-E10 Mirrorless Camera With 16 50 Kit Lens

Rs.180,000

Description:

Sony ZV-E10 Mirrorless Camera With 16 50 Kit Price & Specs

The ZV-E10 is a new Alpha camera and is built upon the expansive E-mount system. The ZV-E10 includes a larger APS-C image sensor, promising shallower depth of field, better image and video quality, and More versatility. The ZV-E10 also comes with the same great autofocus features as users have come to expect from Sony's A6XXX series of cameras. At its core, the ZV-E10 aims to blend the vlogger-friendly design of the ZV1 with the high-quality performance and flexibility of a Sony A6100. Let's take a closer look at Sony's new camera and see what it promises to offer.

Sony ZV-E10 Key Features and Specs
24.2MP APS-C Exmor CMOS image sensor
BIONZ X processing engine
ISO range of 100-32,000 (expandable to 50-51,200)

Digital Audio Interface via Multi-Interface shoe
Built-in directional 3-Capsule mic with supplied windscreen
Headphone and mic jacks
Vari-angle touchscreen
USB webcam compatible (UVC/UAC)
Livestreaming via USB
4K 24p/30p video with full pixel readout and 6K oversampling
Full HD video at up to 120p with full AF/AE
Design and Usability
Ahead of the camera's announcement, we were not given a great look at the ZV-E10 body itself. However, we have seen enough to know that it's very similar in style to the A6100, although a bit more compact. Despite the larger sensor and the lens mount, the ZV-E10 is not much larger than the ZV1. Sony's new vlogging camera is 115.2mm (4.53") wide, 66.9mm (2.52") tall and 59.4mm (1.76") deep. For comparison, the ZV1 is 105.5mm x 60mm x 43.5mm, and the A6100 is 120mm x 66.9mm x 59.4mm. The ZV-E10 weighs 343 grams (body only), whereas the A6100 weighs 396g, and the ZV1 and its built-in lens weigh 294g.
A big difference between the Sony ZV-E10 and the Sony A6100 is the display. While both have touchscreens, the ZV-E10's display is vari-angle, meaning you can swivel it out to

the side to see the entire display while Photographing or recording yourself. This vlogger-friendly feature is a significant difference in terms of usability. You can also turn the camera on simply by opening the LCD, which is a neat feature. The ZV-E10 Includes a recording lamp (visible on the front), a red frame around the LCD during recording, a zoom lever around the shutter release, and an easy-to-hold front grip. The zoom lever can control attached Power Zoom "PZ" lenses and go through ClearView digital zoom (available from 1x to 2x).
The ZV-E10 includes many great still imaging functions, as well, but it is clearly aimed at video content creators, so its control layout is designed accordingly. The ZV-E10 has a large dedicated record button, Including Background Defocus and Product Showcase buttons. These buttons set up the camera to give you a shallow depth of field in the case of the former button, and in with the latter, adjust settings for Optimal performance when filming products/objects. For example, if you're recording yourself showing off an item, you want the camera to focus on you when you're speaking, but the item when you are holding it up to the camera. In the case of either button, you can, of course, set up the camera manually, using aperture priority or adjusting focus area and mode settings. Still, the buttons make it easier for those who may not want to adjust many settings.
