Fits Your Needs
For live streaming, vlogging, gaming, and recording podcasts and music

Works with Your Devices
The mic is compatible with Mac and Windows computers as well as most USB Type-C mobile devices.

Multiple Polar Patterns for Multiple Uses
Two selectable polar patterns are on hand. Choose Cardioid to tamp down room tone, focusing the mic on your vocals. Or choose Omnidirectional to capture sound from all directions, which is great for musical instruments.

Built-In Headphone Jack
You can achieve latency-free monitoring via the 3.5mm headphone jack. Just plug your headphones in and you're ready to listen.

High-Quality Audio Capture
The mic records audio at 24-bit / 48 kHz, giving you the broadcast standard for how many

samples it can record in a second, and providing a high degree of dynamic range. A non-techy translation: this microphone goes is well suited for picking up the nuances of your voice.

Easy-to-Use Controls
The mic offers adjustable mic gain, headphone volume, and mute on/off via a single control, with a corresponding multicolor indicator. Red means mute is on. Purple means you're knob controls the mic gain. Blue means the knob now controls your headphone volume. Isn't that simple?

Everything You Need to Get Started
The mic includes a metal desktop stand as well as an integrated 5/8"-27 hole for mounting the mic on your own stand. Two cables are proved for connection to USB Type-C or USB Type-A ports.
