24.2 Megapixel (APS-C) CMOS sensor

The EOS Rebel T6s camera has a next-generation 24.2 Megapixel CMOS (APS-C) sensor that can capture images of incredible depth and beauty. With high resolution and an ISO sensitivity of ISO 100–12800 (expandable to H: 25600) the EOS Rebel T6s can capture images of immense quality in more lighting situations. Canon DIGIC 6 Image Processor

The EOS Rebel T6s camera is equipped with the very latest Canon proprietary processor, the DIGIC 6 Image Processor, which makes several important advancements to image quality both in photos and video. Improved light sensitivity allows for higher resolution with less noise when shooting in dark conditions at ISO 12800. The DIGIC 6 Image Processor also enhances the camera's performance capabilities, powering full resolution high-speed continuous still shooting and providing distortion correction in camera. Video recording in MP4 format provides better compatibility with mobile devices and tablets. Highly compressed MP4 video not only preserves space on your memory card but also improves playback on mobile devices. Recording HD videos using HDR movie feature is now possible, expanding creative possibilities with an EOS Rebel camera!

EOS Full HD Video

Using technologies designed for professionals and refined for simplicity, the EOS Rebel T6s camera makes gorgeous, polished Full HD videos at the press of a button. Technologies like advanced Hybrid CMOS AF III mean the camera focuses fast, and stays focused, even if the subject is moving. Advanced EOS optics help deliver shallow depth-of-field to provide the beautiful cinematic ambiance seen in professional films. Canon STM lenses provide smooth AF when shooting moving subjects, and the high ISO sensitivity allows the camera to record videos in low light with reduced image noise for almost clear, sharp footage. An automatic wind noise elimination feature makes sure voices and music do not get drowned out by the sound of the wind blowing. Videos are recorded in MP4 format, which helps provide high quality videos that take up relatively little storage space, but are also easy to share and upload. Canon offers a wide selection of compatible EF and EF-S lenses to choose from, so users have the freedom to create truly unique videos to express their artistic vision. With Canon EOS, it's easier than ever to expand your imaging possibilities.

Movie Digital Zoom

Movie Digital Zoom makes it possible to zoom from 3x to 10x during video shooting, adding a whole new level of drama to video clips. Photographers who enjoy capturing wildlife will find the digital zoom useful because it helps extend the range of their lenses to capture subjects that are considerably further away. Plus, with the digital zoom, the photographer can record videos from a great distance without having to move from their position.

Hybrid CMOS AF III

The EOS Rebel T6s camera features a robust, sophisticated AF system for Live View and video shooting. This Hybrid CMOS AF III focuses incredibly quickly and accurately, and maintains focus even while the subject is in motion. This is incredibly useful when photographing or making videos of fast-moving children or pets when unpredictable movement is involved. Designed for providing outstanding autofocus capability, the EOS Rebel T6s delivers photos and videos with sharp, consistent focus regardless of the shooting situation. When using the EOS Rebel T6s with a Canon STM lens, operation is even smoother and quieter.

Top LCD Pane

The EOS Rebel T6s camera features a number of distinctive upgrades that separates it from the pack and makes it the camera of choice for photographers looking to take it to the next level. The illuminated top LCD panel enables a quick look at shooting information and settings without needing to look through the viewfinder or at the rear screen.

Quick Control Dial

The Quick Control Dial includes a Multi function lock switch, and is positioned where the thumb would normally rest. It enables quick changes of settings or images in review, making operation faster and more intuitive across the board.

Electronic Level & HDR movie mode

The EOS Rebel T6s camera's electronic level, displayable in both the viewfinder and on the LCD monitor, is immensely useful when composing landscapes or anytime where accurate horizontal orientation is important. And when shooting HD movies, the EOS Rebel T6s has a new HDR movie mode that minimizes blown-out images in high-contrast scenes. By alternatively shooting properly exposed and underexposed images at 60 fps, then generating 30 fps movies, the EOS Rebel T6s produces gorgeous movies with extensive color gradation and shadow detail.

Vari-angle Touch Screen ClearView II LCD Monitor

Canon EOS Rebel DSLR cameras that come with a Vari-angle Touch Screen 3.0-inch ClearView II LCD monitor use capacitive technology similar to today's popular mobile devices. The screen is touch-sensitive and delivers intuitive touch panel operation. Two-finger touch gestures can be used for zooming or changing images. Menu and quick control settings can be accessed, and focus point and shutter release can be activated with the touch of a fingertip using Touch AF. Displaying fine detail (at approximately 1.04 million dots), this screen is perfect for composing and reviewing images. Thanks to a solid construction between the monitor's resin-coated cover and the liquid crystal display, reflections are minimized, and the display can be viewed, without glare, from any number of angles. The LCD's surface is treated with a smudge-resistant coating to minimize fingerprints and maintain a bright, clear image display.

Fast-Action Shots are Easy to Capture

High-speed continuous shooting

The EOS Rebel T6s camera can shoot up to 5.0 frames per second, continuously. Whether capturing that perfect expression, the game's winning goal, or the bride walking down the aisle, the EOS Rebel T6s delivers the speed and performance to guarantee results.

Intelligent Scene Analysis for Exceptional Results

Advanced Scene Analysis

The EOS Rebel T6s camera features an updated scene analysis system that detects the prominent light source in a scene and makes adjustments to the camera's exposure, focus and color settings to account for the prevailing light. A new RGB+IR sensor that's capable of detecting near infrared light and flickering light sources enhances the Scene analysis system's accuracy. This means the EOS Rebel T6s can minimize the effects of fluorescent light; it takes gorgeous photos in twilight, and it can detect skin tones, for accurate exposure and focus in portraits. The camera can even make the greens in landscapes more vivid!

Consistent, High Performance AF

19-point all cross-type AF system

For shooting through the viewfinder, the EOS Rebel T6s camera features an updated 19-point all cross-type AF system with improved tracking of moving subjects perfect for capturing action with accuracy. Cross-type AF points maintain accurate focus even if the camera is held vertically or horizontally, no matter where on the frame focus is first achieved. The EOS Rebel T6s also features three focusing area selection modes that make accurate focus even easier. Single point AF allows users to easily choose any one of the 19 focus points for precise focus. In Zone AF, one of 5 zones is selected and focus is locked within that area of the composition. With 19-point automatic selection AF, the camera detects the subject automatically. This is especially useful in shooting sports or other unpredictable motion.

Simple to Preview, Easy to Shoot

Fun, Creative Filters

The EOS Rebel T6s camera comes with a number of different creative filters that are available as presets and can be previewed before shooting. Effects include Art Bold, Water Painting, Fisheye effect, Soft Focus, Toy Camera, Grainy Black and White plus Miniature effect in both still photographs and movie mode. With incredibly different effects, creative filters are a terrific way to express or enhance the mood of a scene and make photography with EOS Rebel DSLR cameras even more fun.
