Canon EOS 850D DSLR Camera With 18-55mm STM Lens

Rs.135,000

Description:

Canon EOS 850D DSLR Camera with 18-55mm STM Lens Price & Specs

- 24.1megapixel APS-C CMOS sensor + 4K video recording
- All cross-type 45 Point AF (viewfinder) and Dual pixel CMOS AF (Live View)
- Wi-Fi connectivity + user-friendly ergonomics and interface
- Rs.135,000

Canon EOS 850D DSLR Camera with 18-55mm Lens Overview

Dual pixel CMOS AF

When shooting in Live View, Dual Pixel CMOS AF makes autofocusing faster and more accurate so your shots are sharp and in focus. You also get 3,975 selectable AF positions across your frame for more flexibility in composing your shots.

Eye and Face Detection

Say cheese! Capture every emotion in razor-sharp quality with Eye Detection AF that focuses and tracks the eye of your subject in Live View mode.

EOS iTR AF (face detection) also ensures clear portrait shots by tracking the face of your moving subject in viewfinder shooting.

Superior Viewfinder Shooting

When shooting through the optical viewfinder, the all cross-type 45-point AF* sensor makes precise focusing on moving subjects quick and easy.

There is also no time lag between the actual subject's movement and the viewfinder's display, so you do not lose track of your moving subject.

*The number of AF points varies depending on the lens attached, and the aspect ratio setting.

High-speed Continuous Shooting

Sometimes, photo-worthy moments happen in the blink of an eye. Don't miss the action unfolding before you with continuous shooting at speeds up to 7.5 frames per second in Live View One-shot AF, or 7 frames per second in viewfinder mode.

4K Video Resolution

Record your videos in stunning 4K UHD resolution (23.98p/25p) or record in Full HD (60p). A HDMI terminal lets you output your video to a television or external display so you can watch your videos conveniently with family and friends.

High ISO

An ISO range of 100 - 25600* (expandable to 51200) lets you capture cleaner, sharper shots at night with less noise and blurring even when shooting at lower shutter speed or when shooting handheld.

*Up to ISO 12800 for full HD movies and ISO 6400 for 4K movies

Bluetooth Enabled

Pair your camera and smart device via Bluetooth low energy technology to maintain a constant connection between your camera and smart device.

You can also pair your camera with a wireless remote control such as the BR-E1 or your smartphone to perform remote shooting, for instance, when you want to take a group photo while your camera is mounted on a tripod.

Wi-Fi Connectivity

Share and backup your photos and videos anytime on the go with the EOS 850D's built-in Wi-Fi connectivity.

With Canon Camera Connect app (iOS and Android) installed on your smartphone or smart device, you can wirelessly connect your camera to conveniently perform remote tasks such as:

- Remote Shooting
- Wireless file transfer to smart device or cloud
- Simultaneous photo transfer as you shoot
- Remote playback of photos and videos on your smart device

Vari-angle LCD

View, adjust your focal point and shoot your photos with the touchscreen Vari-angle LCD. With a Vari-angle LCD, you can now shoot from a variety of camera angles, including ground-skimming low angles.
