Godox FV150 High Speed Sync Flash LED Light

Rs.58,000

Description:

Key Features

- Continuous Light / Flash Combo (150W)
- Continuous: 5600K, CRI/TLCI: 96/97
- Continuous Mode: 0 to 100% Dimming
- Flash Mode: 1/16 to 1/1 Power Adjustment

If you know that you want a full-featured moonlight but can't decide whether to go with flash or continuous light; well, you can have both with the **FV150 High Speed Sync Flash LED Light** from **Godox**. In continuous mode the unit has a 5600K color temperature and is dimmable from 0-100% with a CRI/TLCI rating of 96/97, indicating high accuracy in color reproduction. The light also has eight special effects that include Storm variations, TV, and Broken Bulb.

In flash mode the FV150's color temperature is again, 5600K, and power can be adjusted from 1/16 to full power. It supports high-speed sync at speeds as short as 1/8000 second. While you can make these changes in continuous or flash mode locally on the fixture, you can also make them at a distance using the included 32-channel, 16-group radio remote control. It's compatible with Canon, Nikon, Sony, FUJIFILM, Panasonic, Olympus, and Pentax Cameras. The FV150 is ready for worldwide use via its 100 to 240 VAC power supply, and a standard Bowens-mount reflector with an umbrella channel is also included.
